PHILIPS Ultrasound

EHS proudly represents Philips Ultrasound Solutions exclusively in the private sector across KSA. We offer a comprehensive portfolio of cutting-edge ultrasound systems, tailored to meet the diverse needs of healthcare providers in various specialties.

Our experienced and professional team has successfully equipped and installed cutting-edge solutions in leading hospitals across the KSA, we adhere strictly to SFDA regulations, ensuring the highest standards of safety and quality.

From equipment supply and installation to training and ongoing support, EHS is committed to delivering top-tier technology and dedicated service to elevate your healthcare capabilities.

We offer full range of Ultrasound Systems to cover:

- General Radiology.
- Women's Health.
- Cardiovascular. General Radiology.
- Point of Care and Primary Care.

PHILIPS C-Arm

As Philips exclusive partner in the KSA market, EHS is at the forefront of delivering advanced mobile C-arm systems, including the state-of-the-art Philips Zenition series. Our portfolio features the latest in image-guided therapy solutions, offering unparalleled image quality, user-friendly operation, and application-specific protocols to cater to a diverse range of surgical applications. We are committed to enhancing surgical precision and patient outcomes through Philips' innovative imaging technology.

Dental Solutions

We are your trusted dental partner in KSA, offering innovative dental and orthodontic solutions designed to enhance patient care, streamline procedures, and support the practice's success.

Our team of experts is dedicated to providing personalized support and training, helping you to implement the latest techniques and best practices in your clinic. With our commitment to quality and customer satisfaction, we aim to be an integral part of your journey towards excellence in dental healthcare.

- Defibrillators.

MODULAR O.R. COMPONENTS

WALL PANELS

Wall Panels 1mm thick, specially profiled acid resistant or galvanized coated, with the top and bottom of a panel bent backwards, and the panels sides are specially bent to the shape of the letter Z, with perforation for easier installation on or removal from the system substructure. The panels are joined with a 5 mm wide gap which is filled with special bactericidal silicone seal. Panels are made out of 3 different materials: Stainless Steel AISI 304 acid resistant steel grade (4N wet or dry grit, granulation 180-240), Galvanized Steel, or Glass. The panels can be painted in any colour from the RAL palette. Horizontally the panels have a zero joint, and perfect sealing is achieved with our patented Z system which ensures compression in two planes. The vertical where panels touch each other, and the horizontal which is the plane of the screws compression.

MEDICAL DOORS

We produced the first door for our own use, for our own plant in the 80s. Since then, our company has released thousands of doors manufactured on individual orders. We have a full variety of medical Grade doors, in dimensions, functionality, and air penetration. For the manufacture of our door we use only the best material grades. As opposed to other products in the market, in our acid-resistant doors there are no elements made of aluminium or galvanized steel. All doors, even the reinforcements inside the door leaves are made of stainless steel 304 (ach single bolt, washer or rivet are also made of the same high-grade materials. The doors are filled with expanding polyurethane foam, with density 50 kg/m³. We manufacture both hinged and sliding medical doors. The options for doors are automatic or manual, hermetic, lead protection of any thickness, with window and blinds or smartglass. For activators there are standard large button elbow switches, and optionally no contact distance sensors.

LAMINAR AIR FLOW CANOPY

Our Laminar Air Flow Canopies are manufactured from Stainless Steel. We connect air boxes of 650x650, or 350x350, which accommodate the industry standard HEPA14 filters 610x610 and 305x305. The height is 300mm allowing a large plenum space, acting as a buffer which reduces the velocity of the air from duct turbulent, to laminar speed. The diffuser at the exit of the canopy is made of perforated stainless steel sheet, allowing the required outflow speed, while making the assembly durable and easy to disinfect, in contrast to competing standard stretch fabric solutions.

MODULAR O.R. INSIDE THE BOX

Our HELIOS is a specialized luminaire designed for use in clean rooms providing soft, shade and diffused light. It is certified as IP65 suitable for cleanrooms and healthcare facilities. The luminaires are made of white powder coated steel sheet, Polymethyl methacrylate diffusing milky glass or microprismatic diffuser, equipped with an integrated sequential power supply with LED source and DALI control system asstandard. As an option, we can equip it with an antibacterialcoating. Installation of the luminaire is designed for cleanroom ceilings with the clip-in latching system, making it fully compatible with our ceiling system, and easy to change the position within the room within minutes. The 600x600 luminaire can have 45W@4600 lm or 80W@7550 lm. The 1200x600 luminaire can have 90W@9000 lm or 130W@12400 lm.

MEDICAL ROOM LIGHTS

PASS THROUGH BOX

The pass-boxes ensure the full protection and control of items that move between zones with the different cleanliness classes. The pass-boxes are used mainly in situations where there is a risk of the uncontrolled ingress of contamination to a room of higher class of cleanliness. The product is improving the ergonomics in the operating room, where the personnel can pass materials and tools without having to leave it. The pass box consists of 2 pass windows installed in the partition walls between the rooms with the different cleanliness classes or different pressures. This ensures the safe and quick transfer of the materials, tools or samples, minimizing the risk of contamination and limiting the time of their transport (the personnel moving between the zones with the different cleanliness classes do not need to change clothing). As an option, the pass box can be delivered with electronic interlocking and illuminated signals.

MEDICAL CEILING PANELS

Ceiling panels are manufactured in standard dimensions 600 x 600 mm, or 1200 x 600 mm. The Material can be according to the Customer's selection: either AISI 304 Stainless Steel, or galvanized steel painted to any RAL colour. The thickness is normally 0.6mm but can be more if required. Easy clip-in installation system dedicated specifically for clean room environments allows removing of any single panels. Ceiling height can be adjusted. Joints between ceiling panels are sealed with special bactericidal silicone. The entire ceiling system makes a uniform addition to the wall system, forming a tight and hygienic capsule.

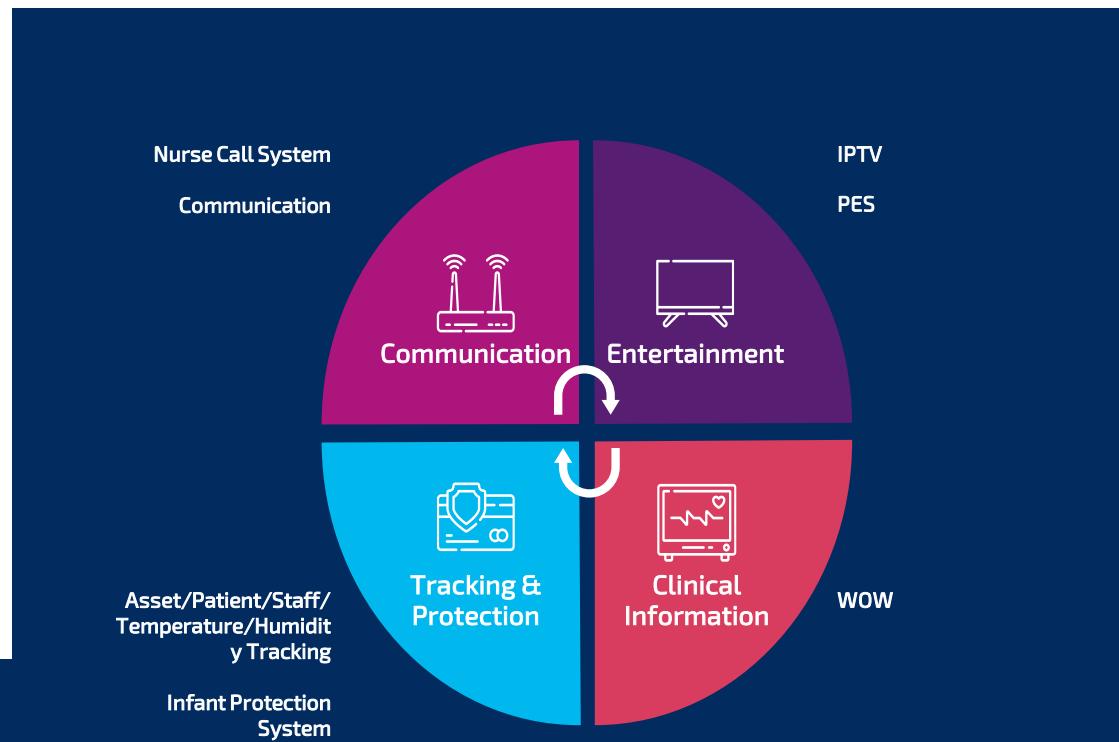

Healthcare Informatics & Technology

Our Healthcare & Information Technology solutions will enable caregivers to enhance their operations and create greater efficiencies in all aspects of healthcare management.

We cater to all technological needs of a modern healthcare provider ranging from clinical information solutions to the installation of communications systems, through our research and development, such as:

Our current portfolio of products in this sector includes:

- Nurse call Systems, system, IPTV, video wall, video wall, Setup-box
- system, Queuing Infotainment digital signing, Setup-box

Medical Consumables and Disposables

We deliver the most advanced and reliable medical consumables and disposables such as Wound dressing , Hospital uniform ,personal protective , Surgery examination, Urinary , LAB disposables , Nursing , Hypothermic , Gloves, Syringes , WASTE SOLUTIONS , STERILIZATION Disposables

We also offer ALL KIND OF SWABS (COVID 19 VIRAL, VMT ,SALIVA COLLECTION SYSTEMS , TRANSPORT MEDIA)and BLOOD COLLECTION SYSTEMS , tubes & needles.

Our current portfolio of products in this sector includes:

- Surgical Supplies
- IV and Infusion
- Infection Control
- Wound Care & Products
- Patient Care
- Sterilization &

Turnkey Projects

Our EHS Turnkey Projects Department excels in delivering comprehensive solutions for medical facilities, tailored to meet client specifications while adhering to industry environmental standards, partner product installation standards, and customer quality standards.

Our expertise spans the entire project lifecycle, from analysis and estimation to value engineering, securing, implementation, issue management, and project handover.

Our team comprises dedicated professionals, project managers, qualified architects, designers, and medical equipment planners, ensuring the highest standards of project execution and client satisfaction.

- Radiology Solutions: Multimodality imaging systems (e.g., CT, MRI, mammography, and X-ray). ICU Setup Solutions (patient monitoring systems, ventilators, infusion pumps, and beds)
- Cardiology Clinic Solutions (ECG machines, echocardiography systems, and stress test equipment)
- Primary Care Clinic Solutions (examination tables, diagnostic devices)
- Cath Lab Solutions (cardiac catheterization equipment, imaging systems, and patient monitoring devices)

Technical Services & Customer Support

We are dedicated to continuously improving our products to enhance sustainability and ensure long-term effectiveness.

To achieve this, we provide regular technical maintenance support, ensuring all equipment and supplies operate seamlessly.

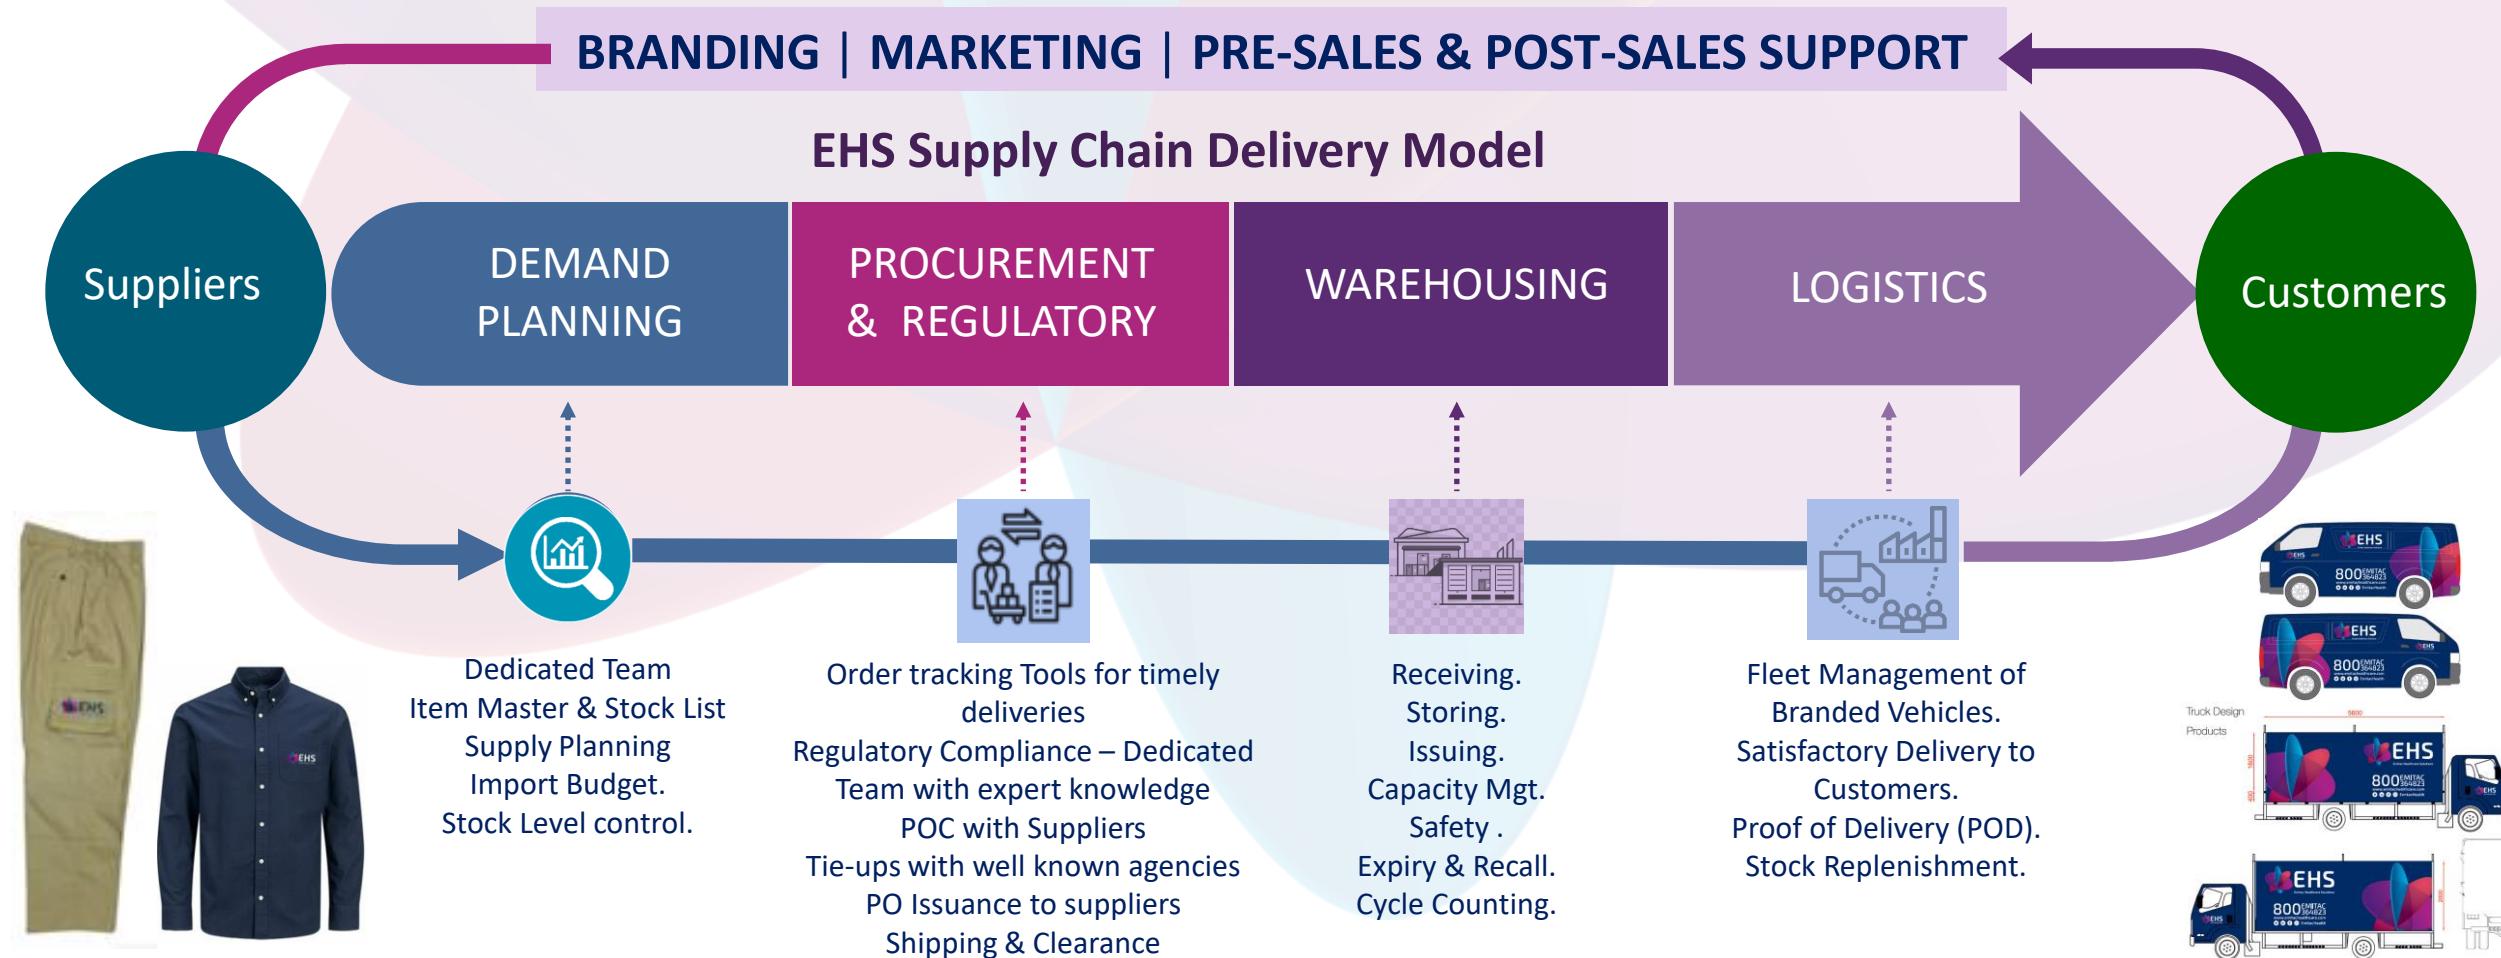

Our Technical Services Group, accredited with ISO 9001:2015 certification, offers 24/7 support to medical facilities, staffed by manufacturer-trained and certified engineers.

EHS Shared Support Functions

OUR SUPPLY CHAIN MODEL

Total Quality Management (TQM) @ EHS

01

Create, Maintain, and Manage important company documents related to Total Quality Assurance. (SOPs, Contracts, Process Flowcharts, etc)

02

Ensure that the quality management system complies with the requirements of the international standards organization.

03

Customer satisfaction & good company reputation.

04

To continually assess operations and advise and guide the team towards full compliance with all applicable internal and external regulations.

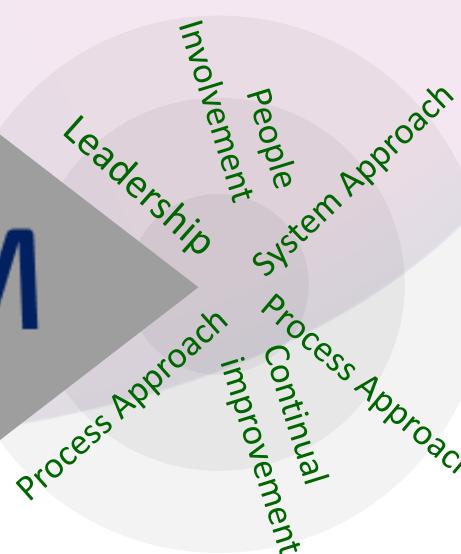

Design

Control

Improvement

Assurance

TQM

05

Support in identifying and preparing the necessary SOPs, Process flowcharts, Policies, and Procedures relative to the control of the quality of services

06

Understanding the Organization and determining its purpose and strategic direction to design its quality management system

07

Understanding the Needs and Expectations of Interested Parties to consistently provide products and services that meet customer satisfaction & regulatory requirements

08

Ensure that the company's quality is maintained during the planning, additions, renewal and change phases.
